

The Gorman-Rupp Company

Ultra V Series® and UltraMate®

Today's pumping applications demand better and more efficient self-priming, solids-handling pumps. At Gorman-Rupp, providing greater performance and reducing installation and maintenance costs have always been our ultimate goals. This makes the Ultra V one of the best values introduced to the pump industry in decades.

This next generation of solids-handling, self-priming centrifugal pumps offers substantially higher pressures, flows, efficiencies and time-saving maintenance features, all in one package.

Ultra V Series pumps achieve up to 60% increased pressure and 40% increased flow over traditional self-priming trash pumps of the same size, while substantially increasing overall pumping efficiency.

Look at the "Interactive Features" and "Video" content for these products for complete details.

Specifications

Size:	3" (75 mm), 4" (100 mm), 6" (150 mm)
Max Capacity:	1,950 GPM (123 lps)
Max Head:	325' (99 m)
Max Solids:	3" (76 mm)
Materials of Construction:	Cast Iron

Features

Extended Versatility for Enhanced Performance

The "VS" version of these pumps can be used when system requirements exceed the Ultra V Series exceptional performance range. By mounting our UltraMate unit directly to the Ultra V through an innovative transition chamber, maximum pressure is increased up to three times the traditional solids-handling self-priming single stage pumps. Losses associated with conventional series connected pumps are also reduced, resulting in increased efficiencies.

The UltraMate unit allows for a variety of discharge positions. This "smart scroll" feature offers installation flexibility. This vertically staged assembly also reduces the footprint required with conventional staging configurations.

The rotating assembly and the back cover plate are interchangeable between the Ultra V and the UltraMate, reducing spare parts inventory.

Specifications are subject to change. Please contact your Gorman-Rupp Distributor for more details.
